How E-Technology Centre is Fun and Dynamic – Kevin

E-Technology Centre team is made up of multi-cultural, creative and dynamic team of Designers, Developers, Consultants, and Management. Despite having different job scope and responsibilities, multiple teams interact and work together during a development project. Such arrangement provides constant interactions between employees, allowing the team to bond closer together after each project. With the implementation of flexible working hours, E-Technology Centre ensures employees are able to balance work and life. [70 words]

How the Whole Company Works Together – Ivan

A development project consists of four main phases namely Discovery, Design, Development and lastly implementation. During Discovery, consultant conducts multiple analysis of customer internal processes to understand in-depth current challenges and constraints. Moving forward, a team of designers will develop software interface according to customer's liking. Once the customer is pleased with the software design, the project enters development phase whereby software solution is developed according to the initial analysis and finally delivered once it has satisfied customer's requirements.
